DETAILED ACTION

1. Applicant's preliminary amendment canceling claims 1-118 and adding new claims 119-138, filed on 20 November 2001 is acknowledged.

Thus claims 119-138 are pending and under consideration.

2. **Priority:**

2a. Based on the information given by Applicants and an inspection of the patent applications, the Examiner has concluded that the subject matter defined in this application is supported by the disclosure in application serial no. 09/941,992 filed on 28 August 2001, because, EXAMPLE 160 (Assay #111; Chondrocyte proliferation assay which demonstrates that the polypeptide encoded by the claimed nucleic acid, induces the proliferation of chondrocytes), which provides a specific and substantial asserted utility or a well established utility for the claimed nucleic acid is disclosed on page 531 of Application no. 09/941,992. However, it does not appear that any of the other prior applications disclose this assay. Specifically, it does not appear that PCT/US99/12252 filed on 02 June 1999, in which the current application claims priority to, discloses the Chondrocyte proliferation assay. Accordingly, the subject matter defined in claims 119-138, is afforded an effective filing date of 28 August 2001, which is the filing date of the U.S application No. 09/941,992.

Should the applicant disagree with the examiner's factual determination above, it is incumbent upon the applicant to provide the serial number and specific page number(s) of any parent application filed prior to 09/04/01, which specifically supports the particular claim limitation for each and every claim limitation in all the pending claims

which applicant considers to have been in possession of and fully enabled for prior to 08/28/01.

Specification:

3a. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Information Disclosure Statement:

4a. References A1 and A2, cited on the PTO-1449 form submitted by Applicants on 31 May 2002 have not been considered, because they do not comply with 37 CFR 1.98(a)(2) requirements, since they fail to identify each publication by author and publication date. Applicant is advised that the date of submission of any item of information or any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the IDS, including all "statement" requirements of 37 CFR 1.97(e). See MPEP § 609 C(1).

Claim rejections-35 USC § 112, first paragraph:

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5a. Claims 119-123 and 132-134 are rejected under 35 U.S.C. 112, first paragraph, while being enabling for an isolated nucleic acid comprising the nucleotide sequence set forth in SEQ ID NO:421, and encoding the polypeptide of SEQ ID NO:422, said

Art Unit: 1647

polypeptide which induces the proliferation of chondrocytes, does not reasonably provide enablement for an isolated nucleic acid having at least 80%, 85%, 90%, 95% or 99% identity to the nucleic acid encoding the polypeptide of SEQ ID NO:422. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make or use the invention.

The instant claims 119-123, 132-134 are drawn to an isolated nucleic acid that has at least "80%, 85%, 90%, 95% or 99%" identity to the nucleic acid of SEQ ID NO:421, or having at least 80%, 85%, 90%, 95% or 99% to a nucleic acid encoding the polypeptide of SEQ ID NO:422, or all of the nucleic acids that hybridize to a nucleic acid encoding the polypeptide of SEQ ID NO:422, however, instant specification does not teach how to make or use said nucleic acid. Instant specification discloses that the polypeptide of SEQ ID NO:422 encoded by the claimed nucleic acid induces proliferation of chondrocytes, therefore, said polypeptide is expected to be useful for the treatment of various bone and/or cartilage disorders such as, for example, sports injuries and arthritis, (see Example 160, assay 111 on page 531). Therefore, only the full length polypeptide of SEQ ID NO:422 encoded nucleic acid of SEQ ID NO:421 can be used for said treatments, because Applicants have not shown that variants of the polypeptide of SEQ ID NO:422, induce chondrocyte proliferation.

Instant claims 119-123, 132-134 are drawn to a genus of nucleic acids that are defined only by sequence identity. Due to the large quantity of experimentation necessary to determine all the nucleic acids comprising a nucleotide sequence that is at least 80%, 85%, 90%, 95% or 99% identical to the nucleic acid of SEQ ID NO:421, or

Art Unit: 1647

those that hybridize to the nucleic acid of SEQ ID NO:421, and to screen for the ones that encode the polypeptide of SEQ ID NO:422, the lack of direction/guidance presented in the specification regarding which variants of the nucleic acid of SEQ ID NO:421 would retain the desired activity, the complex nature of the invention, the absence of working examples directed to variants of the nucleic acid of SEQ ID NO:421, the state of the prior art establishing that biological activity cannot be predicted based on structural similarity, the unpredictability of the effects of mutation on the structure and function of the claimed polypeptide, and the breadth of the claims which fail to recite particular biological activities, undue experimentation would be required of the skilled artisan to make and/or use the claimed invention in its full scope.

5b. Claims 119-123, 132-134 are rejected under 35 U.S.C. §112, first paragraph, as failing to comply with the written description requirement. The claims contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention.

The instant claims 119-123 are drawn to an isolated nucleic acid that shares "80%, 85%, 90%, 95% or 99%" identity to the nucleic acid of SEQ ID NO:421 or to a nucleic that encodes the polypeptide of SEQ ID NO:422, and claims 132-134 are drawn to an isolated nucleic acid which hybridize to a nucleic acid encoding a specific polypeptide. However, the instant specification only describes the structure of the nucleic acid of SEQ ID NO:421, and therefore, conception is not achieved until reduction to practice has occurred. Adequate written description requires more than a

Art Unit: 1647

mere statement that it is part of the invention. To provide adequate written description and evidence of possession of a claimed genus, the specification must provide sufficient distinguishing identifying characteristics of the genus. The factors to be considered include disclosure of compete or partial structure, physical and/or chemical properties, functional characteristics, structure/function correlation, methods of making the claimed product, or any combination thereof. In this case, the only factor present in the claim is a partial structure in the form of a recitation of percent identity or hybridizing language. There is not even identification of any particular portion of the structure that must be conserved. Accordingly, in the absence of sufficient recitation of distinguishing identifying characteristics, the specification does not provide adequate written description of the claimed genus. Vas-cath Inc. v. Mahurkar, 19 USPQ2d I 1111, clearly states "applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of the invention. The invention is, for purposes of the 'written description' inquiry, whatever is now claimed." (See page 1117.) The specification does not "clearly allow persons of ordinary skill in the art to recognize that he or she invented what is claimed." (See Vas-cath at page 1116). As discussed above, the skilled artisan cannot envision the detailed chemical structure of the encompassed genus of polypeptides, and therefore conception is not achieved until reduction to practice has occurred, regardless of the complexity or simplicity of the method of isolation. Adequate written description requires more than a mere statement that it is part of the invention and reference to a potential method of isolating it. The compound itself is required. See Fiers v. Revel, 25 USPQ2d 1601 at 1606 (CAFC 1993)

Art Unit: 1647

and Amgen Inc. v. Chugai Pharmaceutical Co. Ltd., 18 USPQ2II 1016. Therefore, only the isolated nucleic acid set forth in SEQ ID NO: 115, but not the full breadth of the claims meet the written description provision of 35 U.S.C. §112, first paragraph.

Therefore, only the isolated the nucleic acid of SEQ ID NO:421, encoding the polypeptide set forth in SEQ ID NO: 422, but not the full breadth of the claims meet the written description provision of 35 U.S.C. §112, first paragraph.

Claim rejections-35 USC § 112, second paragraph:

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 6. Claims 119-124 and 128, 132, are rejected under 35 U.S.C. 1 12, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 6a. Claims 119-124, 128 and 132 recite ".....the extracellular domain lacking its associated signal sequence....", which renders the claims indefinite because the signal sequence is not generally considered to be part of an extracellular domain, as signal sequences are cleaved from said domains in the process of secretion from the cell. Appropriate correction is required.

Claim Rejections - 35 U.S.C. §102(b):

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 1647

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7a. Claims 119-138 are rejected under U.S.C. § 102 (b) as being anticipated by Ashkenazi et al (WO200032221; published 08 June 2000).

Ashkenazi et al disclose an isolated nucleic acid that shares 100% homology to the nucleic acid of SEQ ID NO:421 and an isolated polypeptide that shares 100% homology to the polypeptide of SEQ ID NO:422 of the instant application, a vector comprising said nucleic acid, and a host cell comprising said vector. See attached copies of the comparison of SEQ ID NO:421 and SEQ DI NO:422, of the instant invention and the sequence of the reference (SEQUENCE COMPARISON 'A and B", respectively). The nucleic acid disclosed by Ashkenazi et al encodes an isolated polypeptide that lacks its signal sequence. Ashkenazi et al also disclose an isolated nucleic acid that encodes the extracellular domain, (see claims).

Instant claims 119-138 are drawn to an isolated nucleic acid comprising the nucleotide sequence set forth in SEQ ID NO:421, encodes the polypeptide of SEQ ID NO:422, or encoding said polypeptide lacking its signal sequence, or encoding the extracellular domain of the polypeptide of SEQ ID NO:422. Therefore, the Ashkenazi et al reference meets all the limitations recited in claims 119-138, anticipating said claims, in the absence of any evidence to the contrary.

7b. Claims 119-125, 127, 129-137 are rejected under U.S.C. § 102 (b) as being anticipated by Walker et al (WO200029574; published 25 May 2000).

Art Unit: 1647

Walker et al disclose an isolated polypeptide that shares 100% homology to the polypeptide of SEQ ID NO:422 and the nucleic acid encoding said polypeptide, a vector comprising said nucleic acid and a host cell comprising said vector. See attached copies of the comparison of SEQ ID NO:422 of the instant invention and the sequence of the reference (SEQUENCE COMPARISON 'C').

Instant claims 119-125 and 130-137 are drawn to an isolated nucleic acid comprising the nucleotide sequence of SEQ ID NO:421, encoding the polypeptide having SEQ ID NO:422, a vector comprising said nucleic acid and a host cell comprising said vector. Therefore, the Walker et al reference meets all the limitations recited in claims 119-125, 130-137, anticipating said claims, in the absence of any evidence to the contrary.

Conclusion:

8. No claim is allowed.

Advisory Information:

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fozia M Hamud whose telephone number is (571) 272-0884. The examiner can normally be reached on Monday, Thursday-Friday, 6:00 am to 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brenda G Brumback can be reached on (571) 272-0961. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorders in mammals.

Claim 61; Fig 91; 315pp; English.

The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA7721 and AAB24388 to AAB24435 represent nucleotide and protein sequences used in the exemplification of the present invention

The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24388 to AAB24435 represent nucleotide and protein sequences used in the exemplification of the

Eleven novel inflammation-associated genes have been identified in cDNA libraries from various tissues. The genes were selected according to their coexpression with the known inflammation genes, CD16, L-selectin, Src-like adapter protein, IP-30, superoxidase homoenzyme subunits, alphalantitrypsin, Clq-A, 5-lipoxygenase activating protein and SRC family tyrosine kinase. The novel polynucleotides may be used in hybridization assays to diagnose a disease or condition associated with altered expression of the inflammation genes. Antibodies against the genes may be useful in compositions for the diagnosis and treatment of such diseases associated with inflammation including rheumatoid arthritis, Crohn's disease, multiple sclerosis, AIDS, diabetes mellitus, asthma and allergy. Additionally the polynucleotides of the invention may be used for gene New human inflammation-associated polypeptide useful for diagnosis, prevention and treatment of inflammatory diseases comprises product gene coexpressed with e.g. CD16, L-selectin and IP-30. Claim 4; Page 42-43; 43pp; English. N-PSDB; AAA27133. Walker MG, 18-NOV-1998; 04-NOV-1999; 25-MAY-2000. (INCY-) INCYTE PHARM INC. 2000-387787/33. The present Volkmuth W, 98US-00195292 99WO-US026234 sequence is human inflammation associated protein Klingler TM;
